

# CodePlex Archive will be shut down after July 1st, 2021.

CodePlex was Microsoft's free, open source project hosting site, which ran from 2006 through 2017. The site has been in archive mode for 3 years. We now encourage customers to use [Github](#) for their open source project hosting needs.

CodePlex will continue as an archive until next July (2021), at which point it will be shut down. Until then, you can browse published projects, documentation, issues, and discussions which were posted before the site went into archive mode three years ago.

For questions or comments please contact [CodePlex Archive support](#).

## Walkthrough: Deploying a InfoPath 2010 List Form in a Visual Studio 2010 solution package

This is the source code for my demo project described on my blog

<http://ikarstein.wordpress.com/2011/04/02/walkthrough-deploying-a-infopath-2010-list-form-in-a-visual-studio-2010-solution-package/>

Here I'll show you how to create a List Form for a SharePoint List using InfoPath 2010. Therefore you need SharePoint 2010 Server with Enterprise CALs! – With InfoPath Forms Services it's possible to render List Forms ("New", "Edit" and "Display" forms) as browser enabled InfoPath forms. This is really, really cool!
