

CodePlex Archive will be shut down after July 1st, 2021.

CodePlex was Microsoft's free, open source project hosting site, which ran from 2006 through 2017. The site has been in archive mode for 3 years. We now encourage customers to use [Github](#) for their open source project hosting needs.

CodePlex will continue as an archive until next July (2021), at which point it will be shut down. Until then, you can browse published projects, documentation, issues, and discussions which were posted before the site went into archive mode three years ago.

For questions or comments please contact [CodePlex Archive support](#).

spwebchangelog

SharePoint Web Change Log

[download archive](#)

An alternate notification feature for SharePoint. It's working on Web basis.

[home](#) [issues](#) [discussions](#)

Project Description

This feature enables the users of SharePoint 2010 to subscribe to a "Web Change Log" that works a the default SharePoint notifications. But the users do not subscribe to a special library or list. Instead the can subscribe to an entire web. All changes in not hidden list are recorded in a Change Log list. And Users can subscribe by using a menu item in the Personal Actions menu.

The project is localized for English and German language by using resources.

I realized the project for a special situation. In this case I need to **export** alerts. But thats not possible by using SharePoint alerts. My project uses settings stored in SharePoint lists. So they are exportible by using methods like PowerShell cmdlet "export-spweb".

Please see my blog article for further details:
