

CodePlex Archive will be shut down after July 1st, 2021.

CodePlex was Microsoft's free, open source project hosting site, which ran from 2006 through 2017. The site has been in archive mode for 3 years. We now encourage customers to use [Github](#) for their open source project hosting needs.

CodePlex will continue as an archive until next July (2021), at which point it will be shut down. Until then, you can browse published projects, documentation, issues, and discussions which were posted before the site went into archive mode three years ago.

For questions or comments please contact [CodePlex Archive support](#).

See my blog post related to this project: <http://ikarstein.wordpress.com/2011/01/14/sample-visual-studio-2010-project-for-creating-a-custom-sharepoint-2010-ribbon-tab-on-runtime/>

Description:

I wanted to create a sample project to show you who you can create a custom SharePoint 2010 Ribbon tab at runtime! – Especially: How to active the custom ribbon tab on “page loaded” (no need to click it!) So this article is an addition to my explanations in my blog article “How To Activate SharePoint Ribbon Tab by JavaScript Code” ().

You are invited to download / update / improve the project! – I’d like to insert more samples in the project about how to deploy Ribbon customizations. In the sample I created a ribbon in a custom list view web page. (You’ll see in the code).

To use the project you need a SharePoint web application named “http://sharepoint.local” and a site collection named “ribbon”.

Deploy the project and open the SharePoint site and it’s list in your browser. You’ll see the custom ribbon tab.

This tab is actived automatically on page load!!!
