

CodePlex Archive will be shut down after July 1st, 2021.

CodePlex was Microsoft's free, open source project hosting site, which ran from 2006 through 2017. The site has been in archive mode for 3 years. We now encourage customers to use [Github](#) for their open source project hosting needs.

CodePlex will continue as an archive until next July (2021), at which point it will be shut down. Until then, you can browse published projects, documentation, issues, and discussions which were posted before the site went into archive mode three years ago.

For questions or comments please contact [CodePlex Archive support](#).

SPFolderImport v1.0

The last days I've created a PowerShell script that enables you to import a whole file system folder into a SharePoint document library using the SharePoint Content Migration API.

It does not create a library and does not create folders and does not upload files.

Instead of that it creates an import structure in an output directory and imports the structure by using the Content Migration API.

See this MSDN article for further information on that:

<http://msdn.microsoft.com/en-us/library/ms481179>

<http://msdn.microsoft.com/en-us/library/ms427553>

On my blog I'll give some more details:

<https://ikarstein.wordpress.com/2012/08/05/powershell-script-spfolderimport-for-import-a-whole-file-system-folder-to-a-sharepoint-document-library-using-the-content-migration-api/>
