CodePlex Archive will be shut down after July 1st, 2021.

CodePlex was Microsoft's free, open source project hosting site, which ran from 2006 through 2017. The site has been in archive mode for 3 years. We now encourage customers to use Github for their open source project hosting needs.

CodePlex will continue as an archive until next July (2021), at which point it will be shut down. Until then, you can browse published projects, documentation, issues, and discussions which were posted before the site went into archive mode three years ago.

For questions or comments please contact CodePlex Archive support.

SharePoint 2010 Excel Export Feature

This feature can be used to export SharePoint lists to Excel Files (.xslx). You can upload templates for the excel export.

home   issues   discussions

The project is ALPHA!!!

The intention of the project is to create a possibility to export SharePoint lists to "plain" Excel files. Not the kind of Excel files you can download by using the SharePoint standard functionality: With that you download a "linked" Excel file that contains a permanent connection the SharePoint. It's a query. - With my project you'll download a real XLSX file. - And you have the possibility to store an template file that contains formatting instructions.

It's not finished but it works! - The test project included in the source code demonstrates the feature. Use "Test List 1". (Not "Test List 2".)

See my blogs for details in some days... : http://ikarstein.wordpress.com
