CodePlex Archive will be shut down after July 1st, 2021.

CodePlex was Microsoft's free, open source project hosting site, which ran from 2006 through 2017. The site has been in archive mode for 3 years. We now encourage customers to use Github for their open source project hosting needs.

CodePlex will continue as an archive until next July (2021), at which point it will be shut down. Until then, you can browse published projects, documentation, issues, and discussions which were posted before the site went into archive mode three years ago.

For questions or comments please contact CodePlex Archive support.

Project Description
The DDF Generator is a SharePoint helper tool to help developers build Diamond Directive Files for solution packages and cabs.

Hey Folks,

I figured to make building solution packs a little easier I'd take the time to write a DDF Generator. It's a really straight forward little console application.

The only parameter it needs is a directory and it builds a DDF file based on the directory structure.

DDFGenerator "C:/path/SolutionFolder"

Operation Completed Successfully.

That's about it.

Hope this helps.

~:)
